

# DNA assembly simulation report

The 'all\_construct\_records' folder contains the final assemblies and 'part\_records' (if generated) contains the original input Genbank files of all parts provided for the assembly. There is one folder for each assembly, which contains:

- The Genbank file of the assembly (.gb)
- A CSV file about the assembly
- PDF files with schematic views of how the parts assemble together (if generated)
- Genbank files of the parts, in the 'provided\_parts\_records' folder

In addition, various summary text and csv files are provided about the simulation.

## Summary table

Outcome	Number of assemblies
Valid	4
Cancelled	0
Errored	0
